Mobile Application Development

Our group of mobile and cloud experts can review your current setup and provide guidance; help craft a plan for the future; or rapidly develop a proof-of-concept for a new idea.

**Strategies for Mobile, Cloud, and Web-based applications** — Providing a detailed strategy and specific action plan.

**Architecture Review and Assessment**

*Performance and Scalability* — Is your current solution architected to meet the demands of your customers — today and tomorrow?

*Maintainability, Flexibility, Cloud-Readiness, Future-proofing* — We’ll help assess if you have the right design and back-end infrastructure to support your initiative.

*Security* — Is your customer data protected?

*Mobile Readiness* — Your customers want mobile access to your service. Is your system designed to do this?

*R&D and Prototyping* — Have a new idea? We can help test the viability and determine costs to bring it to fruition.

Strategy & Custom Solutions

The core of our service offering is providing state of the art software solutions. These solutions vary greatly and every customer provides a unique challenge.

This may entail trying to move a business at a pace that their current technology platform won’t allow or extending current offerings to mobile devices. One size does not fit all, but through our extensive experience working with a multitude of technologies and platforms we have solved countless problems with innovative solutions.

We are mature in our approach, having combined an agile framework with industry best practices for software development. We cover all aspects including project management, analysis, user interface design, architecture, development, testing, support, and hosting.

We are proficient with a wide range of technologies including PHP, Java, .Net, C#, C++, AWS, Google Analytics, PHP, Oracle, MySQL, SQL Server, HTML5, CSS, and JavaScript.

Strategies for Mobile, Cloud, and Web-based applications — Providing a detailed strategy and specific action plan.

Architecture Review and Assessment

- Performance and Scalability — Is your current solution architected to meet the demands of your customers — today and tomorrow?
- Maintainability, Flexibility, Cloud-Readiness, Future-proofing — We’ll help assess if you have the right design and back-end infrastructure to support your initiative.
- Security — Is your customer data protected?
- Mobile Readiness — Your customers want mobile access to your service. Is your system designed to do this?

R&D and Prototyping — Have a new idea? We can help test the viability and determine costs to bring it to fruition.

Cloud Computing

Not long ago, hosting in-house systems required massive capital investments. They needed to be able to support business requirements in terms of availability, performance, security, and overall flexibility. Many companies were unable to access world class offerings in these areas, and those that did gain access paid far too much for it. All this has now changed.

Blue Spurs embraces the cloud in all our solutions. We utilize Amazon Web Services (AWS) among other technologies for our customers. AWS is the market leader in providing Infrastructure-as-a-Service (IaaS) and we are committed to delivering exceptional customer value in utilizing these services.

Successfully moving systems to the cloud requires careful planning and benefits from experience. We can assist in conducting a detailed needs analysis, and then formulate a customized cloud strategy that will focus on creating business value while establishing efficiency.

- Cost Efficiencies — With regards to computing resources you only pay for what you use. Capital investments can also be greatly reduced.
- Responsiveness and Flexibility — Businesses are able to operate with more agility and speed when leveraging cloud resources, improving overall productivity.
- Rich API Support — Cloud infrastructure services can be integrated directly into business systems allowing reduction in development, deployment, and maintenance costs.
- Security — Through key–based access, virtual private cloud (VPC) configurations, granular access permissions, and integrated firewalls, AWS follows the strictest security best practices.
- Scale — On demand scaling of all environments in both directions.

Strategy & Custom Solutions

About Blue Spurs

Blue Spurs designs, develops and supports mobile and cloud-based applications for enterprises by using modern technologies, development tools, and agile methods to solve real customer problems. Blue Spurs provides an unmatched level of customer service and is deeply committed to ensuring customers’ success.

With extensive experience architecting and deploying cloud-based consumer and enterprise applications, Blue Spurs’ team of professionals understand what it takes to deliver reliable and scalable solutions. By leveraging the elasticity and computing power of the cloud, Blue Spurs builds responsive design HTML5 websites in addition to Apple iOS, Android, BlackBerry and Windows Phone mobile applications that provide a great user experience.

A business needs to be dynamic in a highly competitive market and so do the solutions that support it.

If you need help in meeting or accelerating your business goals through the use of innovative solutions, we can help.
